

USER DOCUMENT

A Generative AI Framework for Automatic Comic Strip Generation – User Guide

1. Introduction

The AI Comic Generator is a web-based tool that converts simple text scenarios into complete comic strips. By integrating Large Language Models (LLMs) for script creation and diffusion models for artwork generation, the system allows any user, regardless of artistic skill, to create high-quality comics instantly. This document guides users through accessing the system, entering inputs, viewing outputs, and troubleshooting common issues.

2. System Requirements

- Web browser: Chrome, Firefox, Edge (latest versions recommended)
 - Stable internet connection
 - Valid API keys for:
 - **OpenAI**
 - **Stability AI** (for image generation)
-

3. Getting Started

Step 1 — Launch the Application

Open the hosted Gradio app URL. You will see the main interface containing:

- OpenAI Key field
- Stability Key field

- Scenario textbox
 - Generate button
 - Output gallery and comic strip panel
-

4. How to Use

Step 1: Enter Your API Keys

- Paste your **OpenAI API Key** into the first field.

Get your API key from <http://platform.openai.com/>

- Paste your **Stability AI Key** into the second field. These keys are required for script generation and image creation.

Get your API key from <https://platform.stability.ai/>

Step 2: Enter Your Scenario

Type any story idea into the Scenario box

Example:

“A cat tries to bake a cake but keeps causing funny accidents.”

Step 3: Click ‘Generate Comic’

The system automatically performs:

- Script creation
- Breakdown into panels
- Image generation
- Text rendering
- Comic-strip stitching

Step 4: View and Download Outputs

- Individual panels appear in a **Gallery**.
 - The full comic strip appears as a **stitched image**.
Users may right-click and save images locally.
-

5. Features for Users

- Fully automated comic generation
 - Panel-wise text + illustrations
 - Comic strip compilation
 - Simple, intuitive interface
 - No drawing skills required
-

6. Troubleshooting

Issue: Images not generating

- Check if Stability API key is valid
- Ensure scenario text is not empty

Issue: JSON error

- LLM may fail to produce strict JSON
- Retry with a simpler or clearer scenario

Issue: Blank or inappropriate images

- Stability API content-filter may block images
 - Modify wording in the scenario
-

8. Support

For issues or feedback, contact the developer or check the project repository.
